

IEC Future Leaders Industry Forum

Take the next step!

26-27 March 2018

Participate in the IEC Future Leaders Industry Forum

sponsored by Siemens, a Market Strategy Board (MSB) Member, on 26-27 March 2018, in Munich, Germany. Learn more about, exchange, and develop a paper on Security in Smart Infrastructures.

IEC Young Professionals,

We are pleased to announce the IEC Future Leaders Industry Forum, a next level initiative for IEC YPs who want to get more involved in IEC work and contribute to the IEC Market Strategy Board's (MSB) market and technology watch activities.

The Forum:

The objective of the Forum is to bring together a group of Future Leaders who have already attended the IEC YP workshop to discuss the following aspects on Security in Smart Infrastructures:

- Current industry landscape
- Top innovations that are expected to shape the industry in the coming years
- Anticipated standardization needs
- Anticipated conformity assessment needs
- Recommendations for the IEC

Future Leaders' technology insight paper:

Participants will be asked to do some preparatory work provided by a research institute in advance of the Forum and this content will then be finalized at the Forum. As a result of the Forum's discussions a Future Leaders' technology insight paper will be developed and submitted to the MSB for approval. The paper will then be promoted and distributed widely within and potentially beyond the IEC Community. The names and companies of all the participants will be listed in the paper for transparency and to recognize the contributors to the paper, giving the Future Leaders and their employers a wide exposure.

What to expect:

The Forum will start in the afternoon of 26 March with an optional industry visit at Siemens, followed by a welcome reception in the evening. The next day will be a full working day to discuss the different aspects of the Forum's theme, which will also be the basis for the technology insight paper.

Preparatory information and questions will be given to the participants before the Forum to prepare the discussions. The participants will also be asked to give their comments and feedback on the technology insight paper once it has been developed.

Benefits for you:

- Network with top experts in Security in Smart Infrastructures
- An opportunity to influence the future of IEC standardization and conformity assessment work through the paper's recommendations
- Learn more about IEC work ongoing in your specific field
- Generate exposure for you and your company within the IEC Community, your names will figure in the paper
- Open a direct feed for you into the CAB, SMB and MSB

Benefits for your employer:

- Support the IEC market and technology watch activities which influence the future of IEC standardization and conformity assessment work
- Gain exposure in the IEC Community by figuring in the paper
- Knowledge of the latest IEC developments in their field through you

Selection process:

IEC National Committees will select one of their IEC YPs, expert in Security in Smart Infrastructures, to take part in the Future Leaders Industry Forum. IEC will cover the accommodation costs for the participants for one night.
